Guide: Accessing the Volve Dataset for Classroom Use

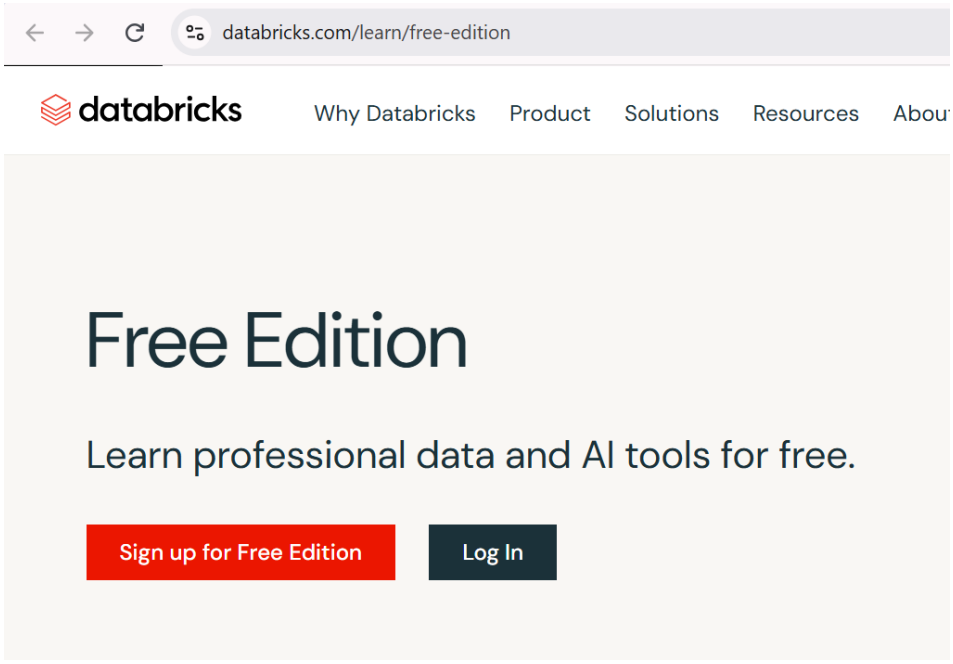

This guide provides a repeatable, step-by-step procedure for educators to access the Equinor Volve repository and implement the data curation framework described in **Mosobalaje et al. (2026)**.

Prerequisite

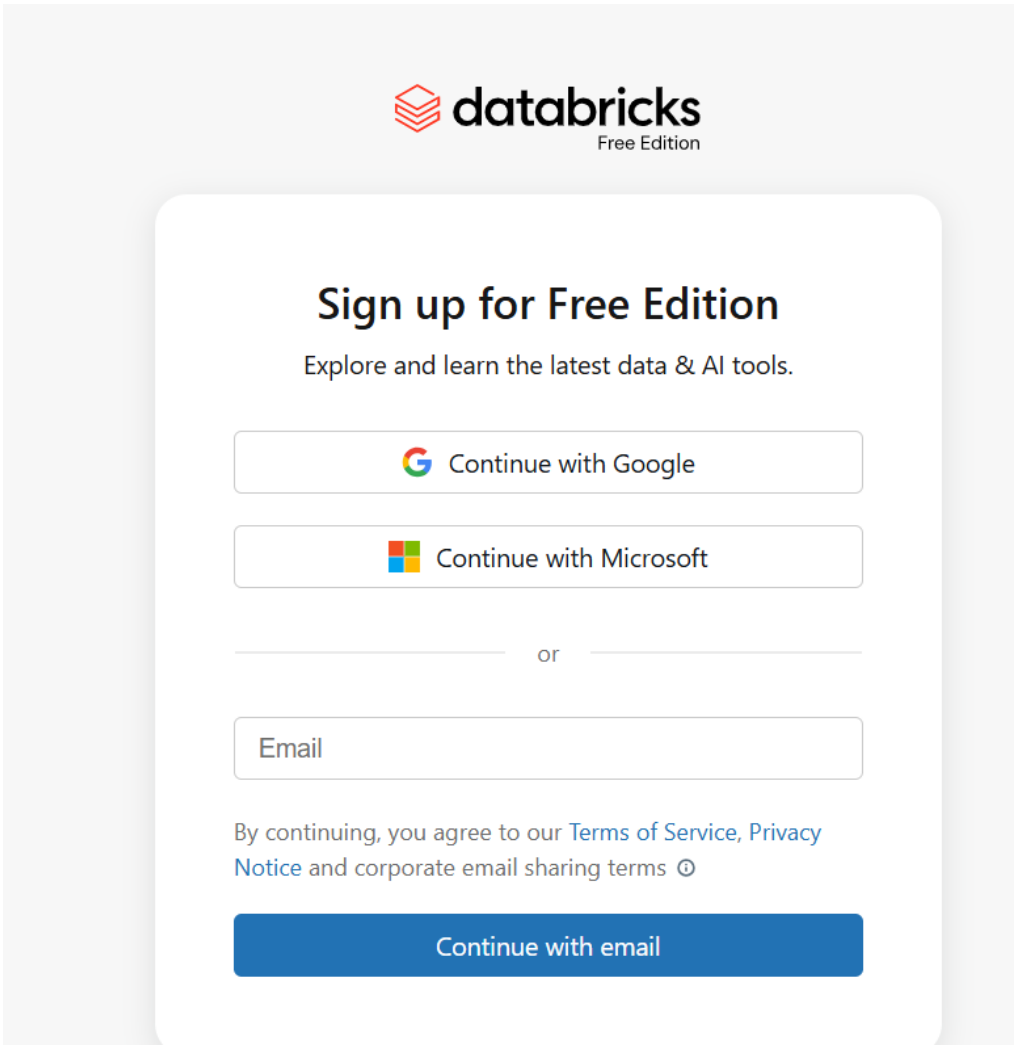

- A valid Microsoft or Google account for authentication.

Step 1: Databrick Account Setup

1. **Account Setup:** Create a **Databricks Free Edition Account**. https://www.databricks.com/learn/free-edition

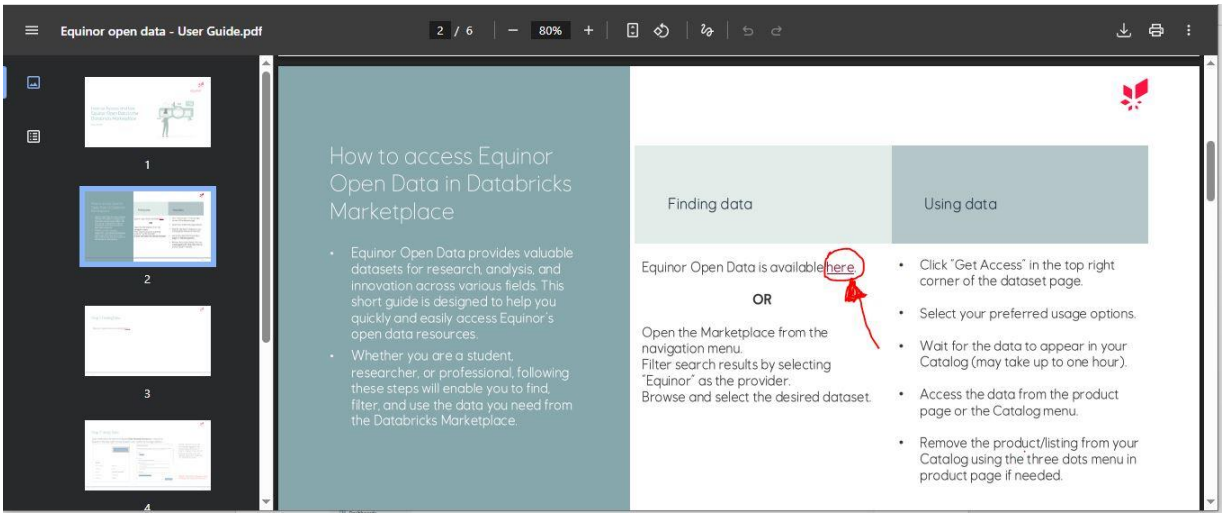

Note: It is strongly recommended to use a Microsoft or Google account for seamless authentication.

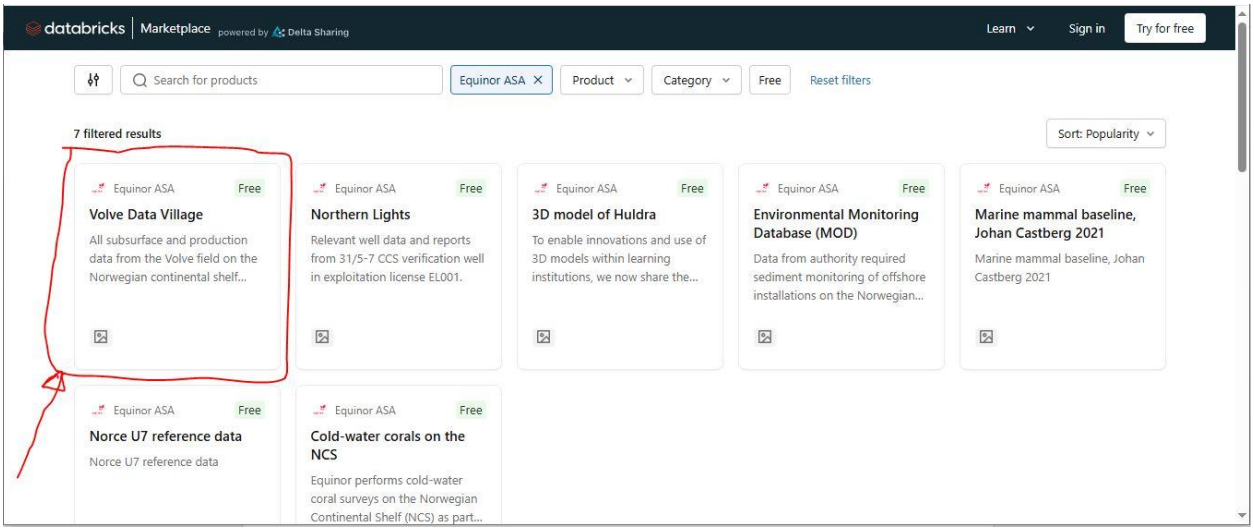

2. **Login:** Login through your selected account provider to enter the Databricks interface.

Step 2: Entering the "Volve Data Village"

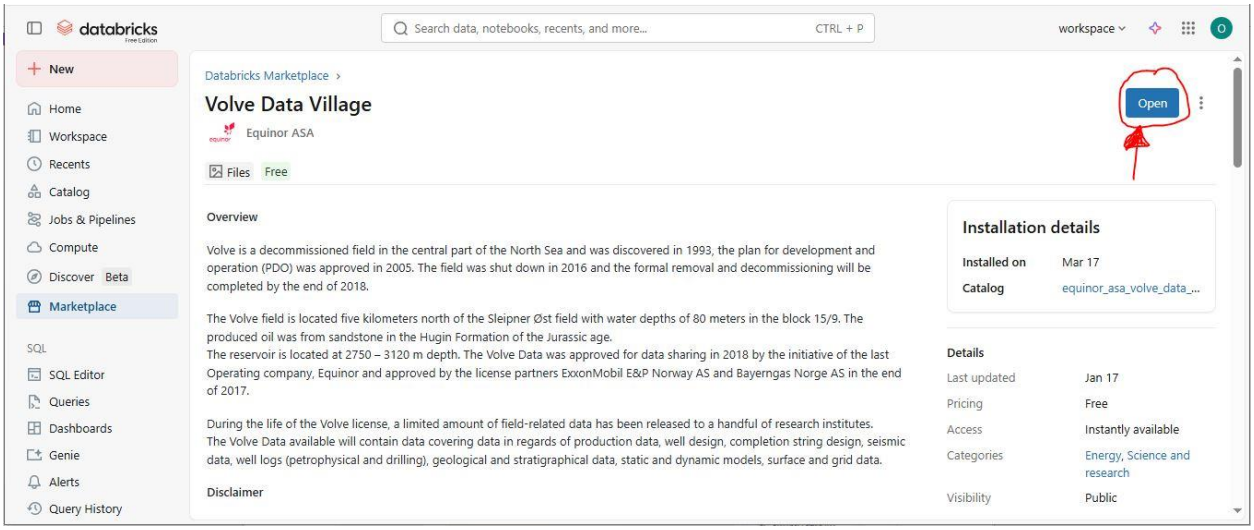

1. Access the official Equinor Open Data via the link provided in the *Equinor Open Data User Guide*.

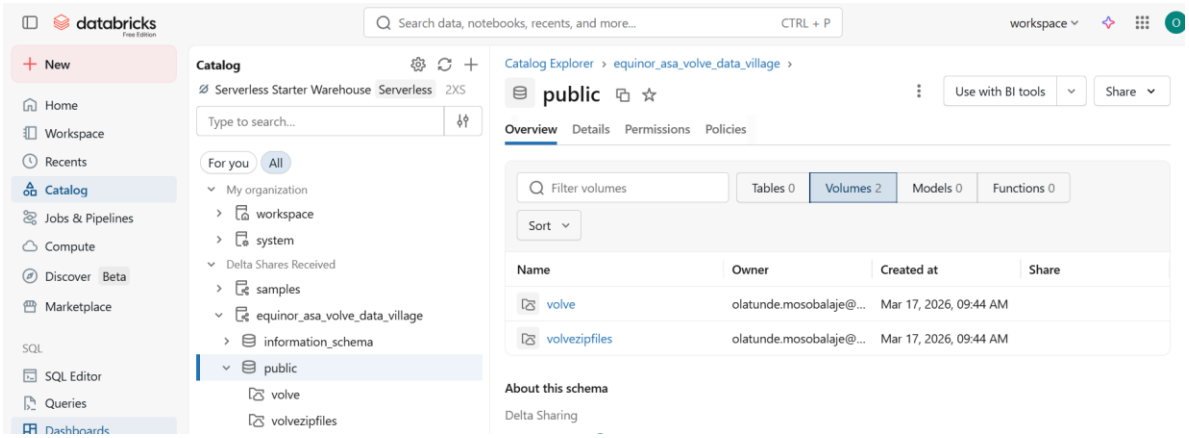

2. **Product Selection:** From the list of available Equinor products, locate and select the "**Volve Data Village**". You may need to scroll down the page.

3. Click the **"Open"** or **"Get Access"** button (and login again, if prompted) to launch the Databricks workspace associated with the Volve repository.

4. Once in the workspace, click **"Open"** to reach the root directory.

5. Navigate to the specific sub-directories required for your curriculum.
6. Download any desired directory or file.
