Guide: Accessing the Volve Dataset for Classroom Use

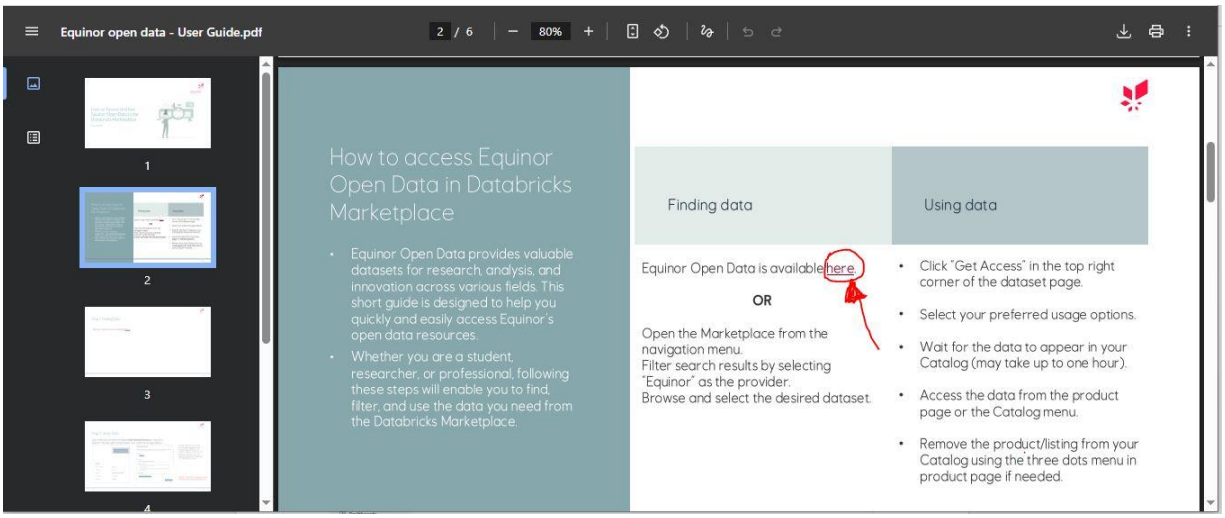
This guide provides a repeatable, step-by-step procedure for educators to access the Equinor Volve repository and implement the data curation framework described in **Mosobalaje et al. (2026)**.

Prerequisite

- A valid Microsoft or Google account for authentication.

Step 1: Account Setup

1. **Navigate to the Portal:** Access the official Equinor Open Data via the link provided in the *Equinor Open Data User Guide*.



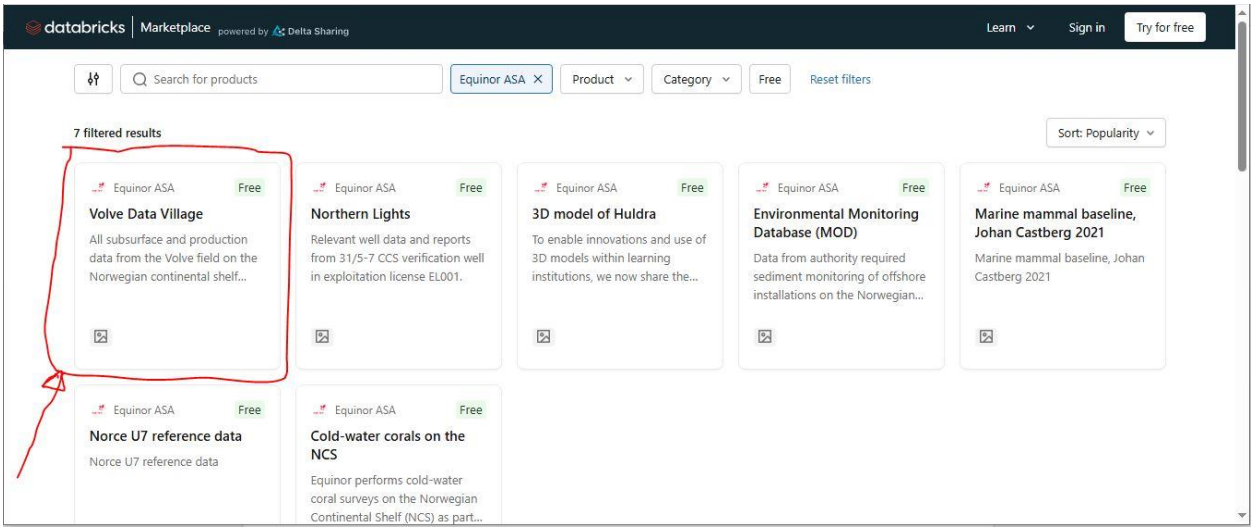
2. **Account Setup:** When prompted, select the option to create a **Databricks Free Edition Account**.

   Note: It is strongly recommended to use a Microsoft or Google account for seamless authentication.

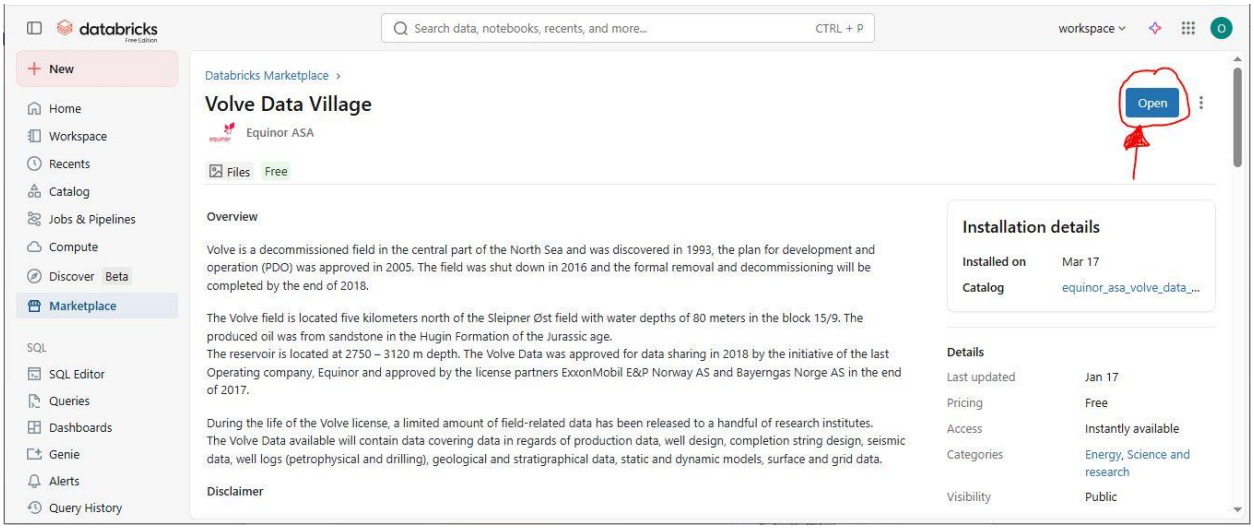
3. **Authentication:** Complete the login process through your selected account provider to enter the Databricks interface.

Step 2: Entering the "Volve Data Village"

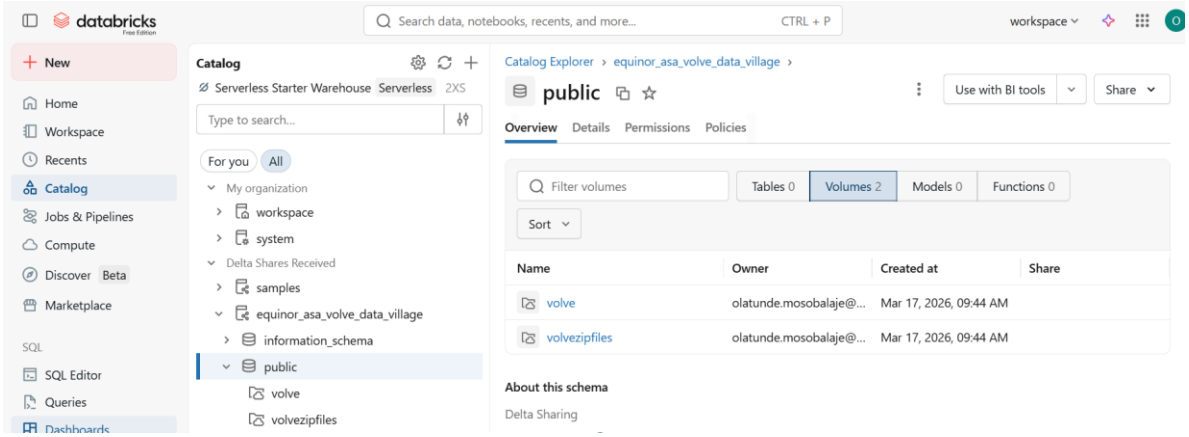
1. **Product Selection:** From the list of available Equinor products, locate and select the **"Volve Data Village"**.

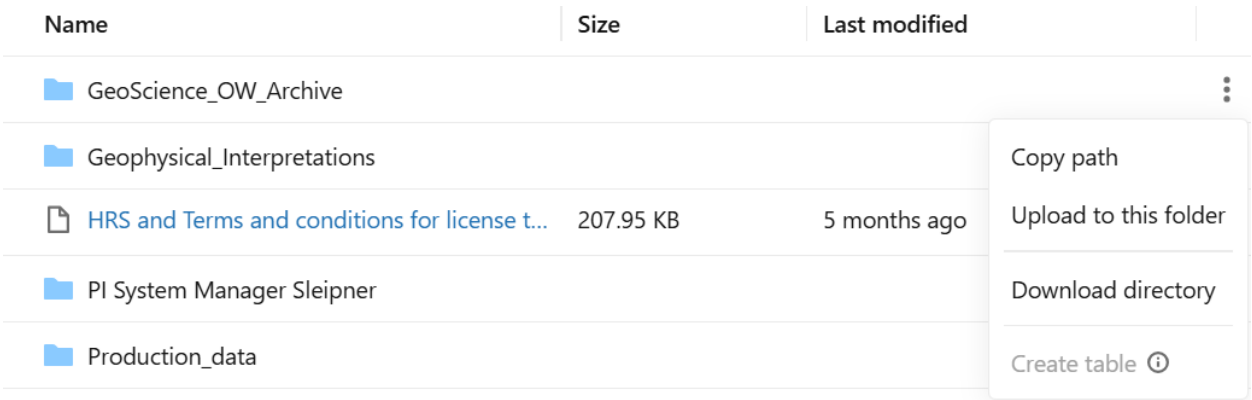


2. Click the **"Open"** button to launch the Databricks workspace associated with the Volve repository.



3. Once in the workspace, click **"Open"** to reach the root directory.





4. Navigate to the specific sub-directories required for your curriculum.
5. Download any desired directory or file.
